

ImageSource Announces the Launch of ILINX Capture – Distributed Transactional Capture that is Easy & Affordable

Olympia, WA -- September 26, 2008-- ImageSource, Inc. announces the release of "ILINX Capture," a new solution that addresses document capture automation like no other product on the market. ILINX Capture is a product targeted at organizations who want distributed transactional document scanning that is easy to use, easily deployed and affordable enough to empower anyone in an organization to capture information right at their desktop.

Perfect for ad-hoc or transactional activities, ILINX automates the capture of information from both paper and electronic sources, converts it into functional information and delivers a variety of digital formats to the systems that manage your business processes.

"Capture has traditionally been restricted to certain segments within organizations. Due to cost and complexity, the mass adoption of ad-hoc capture has been limited," said Shadrach White, CTO, ImageSource. "ILINX Capture was designed to empower entire organizations, from the CEO down, to take advantage of the multiple benefits transactional capture provides."

ILINX Capture is a complete document automation platform, designed to streamline the process of acquiring documents and information securely and confidently. ILINX does scanning and indexing, but it also does much more.

The ILINX Capture Client packs plenty of production capture features into a thin browser-based application that is easily deployed to any desktop in the world with an internet connection and a browser. Documents can be scanned with any TWAIN scanner or imported from the desktop.

With ILINX Capture you can...

- Capture documents easily from anywhere in the world via the browser
- Capture and index large volumes of documents securely and efficiently or simply capture a single transaction
- Automate complex capture and indexing tasks
- Import and process Email, e-docs and Faxes
- Ensure corporate compliance by managing, auditing and monitoring incoming documents
- Easily integrate with third-party and legacy systems for in-process workflow and document storage

ILINX Capture uses a unique business process engine complete with a visual workflow designer and flexible processing queues to allow people to work together across the world. SCAN in Sydney, INDEX in London, APPROVE in New York, STORE in San Diego! The possibilities are endless with ILINX.

When it comes to automating document capture, ILINX stands alone in its ability to create flexible document capture processes on the fly and with ease. No programming is required!

Key Features

- Thin Capture Client
- Easy to learn, easy to use
- Visual Capture Process Designer
- Thumbnail Document Classification Mode
- Bar Code Recognition
- Machine Printed Character Recognition (OCR)
- Hand Printed Character Recognition (ICR)
