

A Proven Method for Achieving Business Results

Delivering value to the bottom line

An **ECMECOSYSTEM**[®] assessment provides a clear action plan to help you reach business objectives for meeting growth demand, delivering operational efficiencies and achieving direct savings through automation.

It includes on-site business process analysis, enterprise business process design and IT system design. Recommendations are documented to provide a strategic, tangible road map to deliver repeatable value with current and future ECM investments.

The right partner to help you move your ECM strategy forward with confidence

ImageSource has been leveraging our **ECMECOSYSTEM** methodology to advise, implement and support Enterprise Content Management (ECM) solutions for organizations globally for more than 20 years.

Utilizing expert personnel and a broad portfolio of world-leading ECM technologies, we help improve critical business processes that leverage the management of data, paper, content and integration with key business systems.

Build a vision with achievable milestone within your organization

Understand Executives' Business Priorities

Current State Analysis

Identify Business Goals & Objectives

Future State Design

Define Business Value

YOUR EXECUTABLE ACTION PLAN

PLAN OBJECTIVE

We will provide your organization with a **road map that outlines high value content and process** that either drives growth or drive down incurred costs, and shows you how to improve both. The **ECMECOSYSTEM** analysis will define key factors for successful implementations, so the result meets or exceeds expectations.

PROCESS SUMMARY

The first part of the three essential elements provided in the Process Summary will yield **insight into your current processes**. Second, it produces **recommendations for improvement** based on industry best practices and benchmarking. Third, it will provide you with one or more **business cases for project justification**.

TECHNICAL REPORT

Defines business and technical requirements, and **outlines steps to departmental or enterprise deployment**. Investment return findings can be used to prioritize key departments and processes to target for operational improvements.

		PROCESS	TECHNOLOGY
1	Phase 1 Discovery	Line-of-Business Interviews	IT Interviews
2	Phase 2 Analysis	Business Challenges	Technology Operations
3	Phase 3 Report Generation	Line-of-Business Future State	IT Future State
4	Phase 4 Customer Validation Final Presentation	Business Case
